

Fitting & Setting Instructions

Trapinator Possum Trap

Mount the base approximately 1 metre from the ground, using the nails and screw provided. We recommend removing the steel frame, to make mounting the base easier.

Replace the frame and apply suitable lure to the bite block. You can purchase lure from our online shop.

To set the fire off adjusting screw, push the red handle forward on the side, to the set position. Wind the adjusting screw down until the trap fires. (Remember to keep your hands away from the side when it fires) Back off the screw 2-3 turns or to your desired sensitivity and reset the trap. It is now ready once a Possum bites and pulls down the bait block. Close the lid, you are now ready to catch your first Possum!

Congratulations, you have caught your first Possum. To release, simply push the red handle on the side forward and remove the Possum. Rebait and get ready for your next Possum!

Note: Traps meet NAWAC humane kill standards.
